

*High performance*

## FULL LOAD TAKE OFF AT 6,000 FEET

The Envoy Series II has ample power for operating from aerodromes situated at high altitudes. For instance, at 6,000 feet with Cheetah IX engines, the take-off run, in a 5 m.p.h. wind, is approximately 300 yards, whilst if one engine should cut out at this height, the aircraft will still climb on full load at the rate of 50 feet per minute. The safety margin of the Envoy Series II is, therefore, very high, and is another factor of interest to Airline Operators.

# ENVY SERIES II

*Executives are invited to write on their letterheads for a copy of the "Airspeed Bulletin," sent free. To other people who would like a copy, it is sent post free for 6d.*
